

What is claimed is :

1. A construction for a spark plug terminal electrically and mechanically connected to a spark plug cable terminal, comprising :
  - (a) a cotter pin which is inserted in the upper portion of said spark plug terminal;
  - (b) a spacer which is positioned on said spark plug terminal;
  - (c) a coiled spring located adjacent to said spacer whereby axial spring pressure is applied against the spacer;
  - (d) a slotted spark plug cable terminal; and
  - (e) a sliding spark plug cover.
2. The construction of claim 1, wherein the slotted spark plug cable terminal sitting on the spring loaded spacer and being hooked up by the cotter pin so as to form an interlocking mechanism.
3. The construction of claim 1, wherein the sliding spark plug cover slides along the spark plug cable so as to expose the spark plug cable terminal.
4. The construction of claim 1, wherein said construction employs pressing and turning in mechanical operation.
5. The construction of claim 1, wherein the cotter pin, the spacer and the coiled spring are positioned on the spark plug terminal respectively.
